iPRISM
A PRODUCT OF ST. BERNARD SOFTWARE, INC.

Internet Access Management Appliance
ENFORCES WEB USAGE POLICIES

iPrism® is the Internet access management solution of choice used by Information Technology and Human Resource professionals to help enforce an Internet Acceptable Usage Policy (AUP) within an organization. Winner of the coveted PC Magazine "Editors' Choice" Award, iPrism is a hardware appliance that monitors, filters and reports on inappropriate Internet access within businesses, schools and government agencies.

Decreases Legal Liability Risk
"70% of all Internet porn traffic occurs during the 9-to-5 workday." (SexTracker) Avoid hostile environments by filtering pornography, prejudicial and violent websites.

Increases Employee Productivity
"Companies lose up to $3,000 per year per employee due to non-business related Internet activity." (IDC Research)

Minimizes Network Bandwidth Drain
Protect precious bandwidth by limiting access to high bandwidth sites such as those offering downloadable MP3 files, chat, games and instant messaging as well as bandwidth-intensive services such as streaming media.

Offers the Best URL Database
By using a 100% human-reviewed rating system, the millions of sites within iPrism's 60-category database make it the most accurate in the industry. Your subscription includes automatic, daily database updates.

Industry Comments

"iPrism is the best return on a busy network administrator's time and money."
  –PC Magazine

"The iPrism is a truly impressive device. Easy to install and easy to configure, its powerful yet simple-to-use filtering should be sufficient for any organization."
  –SC Magazine

"iPrism is a great solution for keeping users 'honest' and in compliance. It's easy to configure and administer and gives your users the flexibility to override a filter. In short, iPrism will make the CEO and HR manager happy and your employees more productive."
  –Microsoft Certified Professional Magazine

"Analysts and testers praise iPrism's ease of use and flexibility. As the industry's leading Web access appliance, the iPrism Internet Filtering Appliance boosts employee productivity enough to pay for itself in weeks! The product's value proposition makes it a must see for any executive seeking to improve on productivity."
  –ComputerWorld ROI Magazine

## Best-Of-Breed Internet Access Management Appliance

- Self-contained appliance optimized for web filtering
- High performance, full-featured solution with a low TCO
- Integrated hardware bypass technology means no single point of failure and no loss of Internet connectivity
- Works in virtually any network environment and easily adapts to changes in network topology
- No additional hardware or software to purchase, install, manage or maintain
- Highly secure solution
- Automatic operating system and software application upgrades
- All-inclusive subscription includes hardware and software support
